Saudi Arabia plans for new Stadiums

Saudi Arabia is set to make a significant impact on the global sports stage with its bid to host the 2034 FIFA World Cup. The bid includes plans for 11 new stadiums, highlighting the country's commitment to modernizing its infrastructure and enhancing its international profile. The announcement, made in Paris, showcases the kingdom's intent to build new stadiums across five key cities: Riyadh, Jeddah, Khobar, Abha, and Neom's futuristic city, The Line.

FIFA WORLD CUP 2034 :

Football is the world's most loved and most watched sport
3.5 billion fans worldwide and up to 250 million players across the globe
Saudi Arabia is focusing on the bid to host the FIFA World Cup 2034

Football, or as it is endearingly known “the beautiful game”, is changing. Its balance of power which resides in European leagues such as the UK's English Premier League and Spain's LaLiga is being challenged by an unexpected newcomer, the Kingdom of Saudi Arabia. The impact of the change is being felt globally by players, clubs, and fans alike.

FIFA Requirements for Communications technologies

Voice communications technologies include:

- PMR;
- matrixed wired and wireless intercoms systems;
- fixed-line telephony services; and
- **the latest generation of mobile telephony services.**

The Stadium Authority is responsible for making the existing Stadium infrastructure, support and operations agreements available to FIFA for use during the Competition. This would include e.g., voice-over internet protocol (IP) systems, distributed antenna systems designed to meet high-density and high-capacity requirements, trunked radio base stations (e.g., Trunked Terrestrial Radio (TETRA), digital mobile radio (DMR) or other technology) and intercom panels, plus any cabling or other passive infrastructure in place. It is the responsibility of the Stadium Authority to ensure that there is full coverage throughout the Stadium precinct and within internal spaces, and that all parts of these systems are tested and certified to be in good working order.

City-wide mobile/cellular infrastructure

High-quality, ubiquitous mobile network services are critical for all stakeholders at the Competition, providing voice and data connectivity supporting both the successful delivery and operation of the Competition and also the enjoyment of spectators and other visitors within the Venues.

Mobile network services encompass the mobile network coverage and capacity to be provided by MNOs, who shall collectively provide mobile network coverage and capacity throughout the Host City.

- All MNOs in the Host City shall provide latest generation (e.g., 5G, 6G or other future technological advances) mobile network coverage and capacity to all official Sites.
- The mobile network coverage and capacity provided shall utilize internationally recognized, standards-based, commercially available mobile networks to provide voice and data connectivity for end users to international telecommunications networks and to the public internet.
-

The mobile network service provided by each MNO shall satisfy the service availability requirement greater than 99.8%.

EVENT TECHNOLOGY REQUIREMENTS

- Telecommunications and network infrastructure
- Community access television service (CATV)
- Press conference audio and video systems
- Private mobile radio (PMR) service
- Mobile network service

The Stadium Authority is responsible for the delivery of the above event technology project scope in line with FIFA technology standards. This includes equipment, implementation services, logistics, power and facilities, plus operations and maintenance of these technology solutions by suitably qualified and experienced technicians and support staff, either incumbent or contracted service providers. Specific details, such as system designs and configurations, bandwidth requirements, equipment and operating locations, etc., shall be defined by FIFA and provided iteratively to the Stadium Authority via a series of Technology Requirements documents.

Smart Stadium Solution

Smart Solution

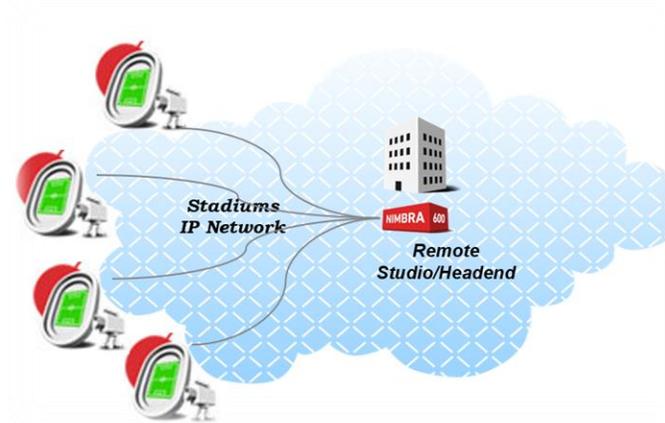

Fan Experience

- Smart Parking
- Food And Drinks Ordering
- Indoor Navigation
- Video Streaming (Remote Production)
- Replays

Stadium Operations

- Security Cameras With Facial Recognition
- Real Time Efficient Crowd & Access Control
- Automated Emergency Response
- Sustainability Solutions - Improving Energy Efficiency

ACES Smart Stadium Vision

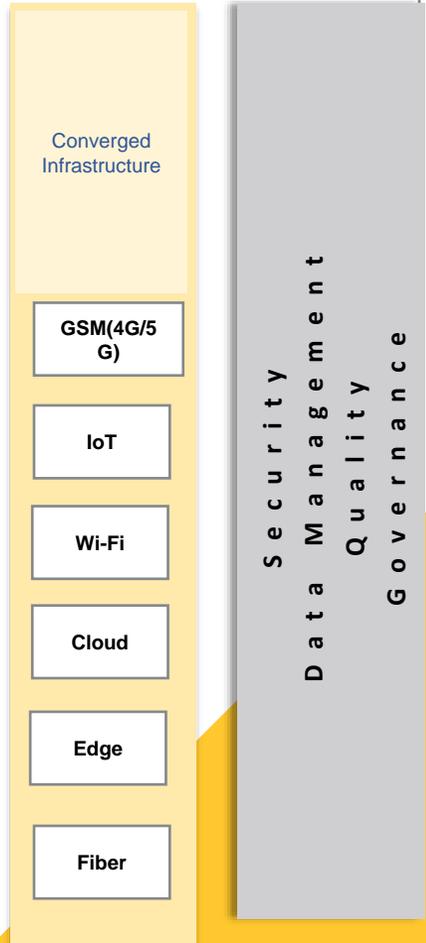

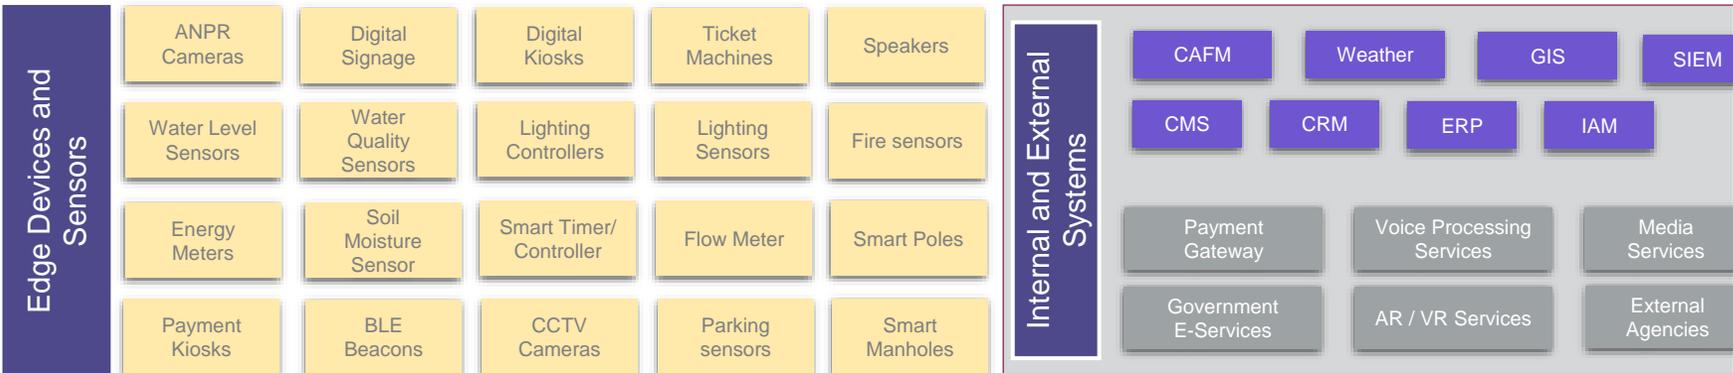

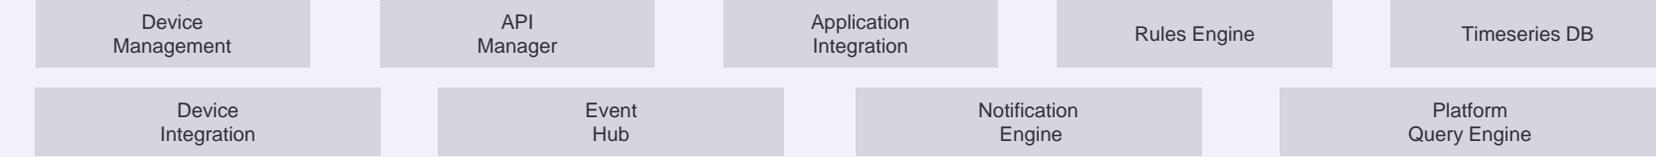

- Experience
- Safety and Security
- Operational Efficiency
- Reduced costs
- Communications
- Facilities usage
- Sustainability
- Scalability
- Marketing Opportunities
- Retail Solutions

Smart Stadium Architectural Overview

ACES Implemented Neutral Host - Stadiums

King Saud Stadium

King Abdullah Sports City

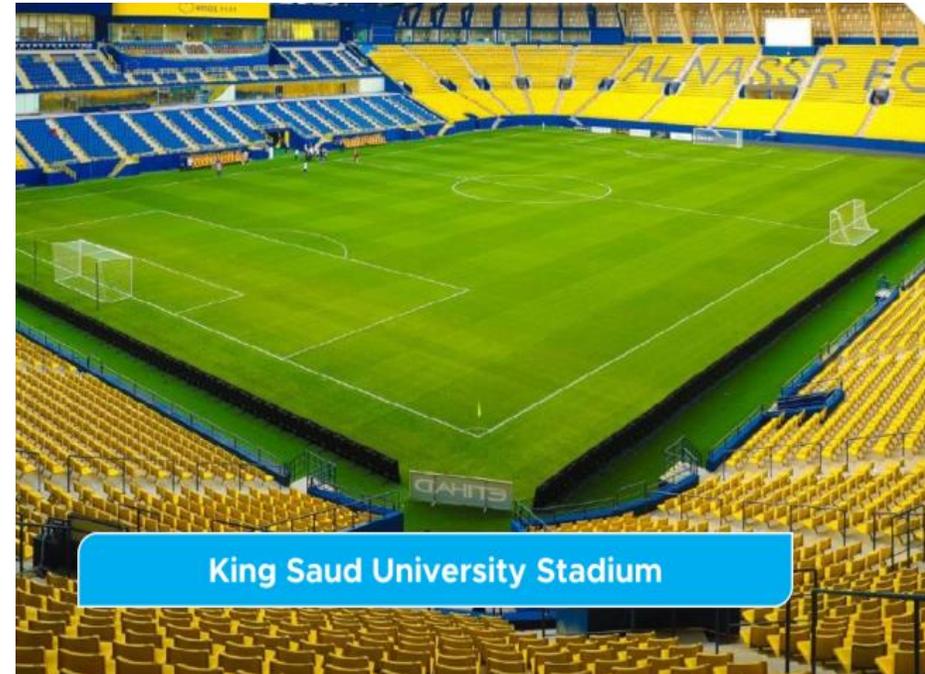

General Sports Authority
الهيئة العامة للرياضة

Success Story:

AlAwwal Park (KSU Stadium):

Project Info: Stadium capacity is 25,000 & total area covered is 95,680 m²

NH DAS Information: Sharable Active DAS MIMO system supporting the following bands: 900,1800 and 2100 MHz & 5G 4X4 indoor area & 64x64 for seating area

Location : Riyadh

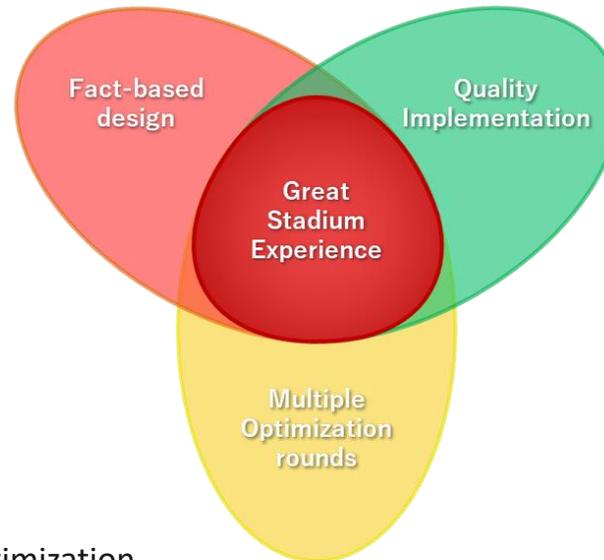

Start: 2020 **Duration:** 10 Years

SECTORS	ANTENNAS
 4G 19 5G 29	 4G 132 5G 66
MIMO	REMOTE UNITS
 Massive 64X64	 4G 68 5G 26

Stadium Design and Optimization:

Design: IBS design process at stadium take very long time and to be reviewed and approved by stadium approved consultant.

Implementation: the Quality of IBS installation at stadium play a major rule on sites performance due to the important of PIM values at high-capacity venues.

Optimization: at stadium environment, multiple optimization rounds during high density events will be required to reach to optimize sites performance.

Design/Optimization Challenges:

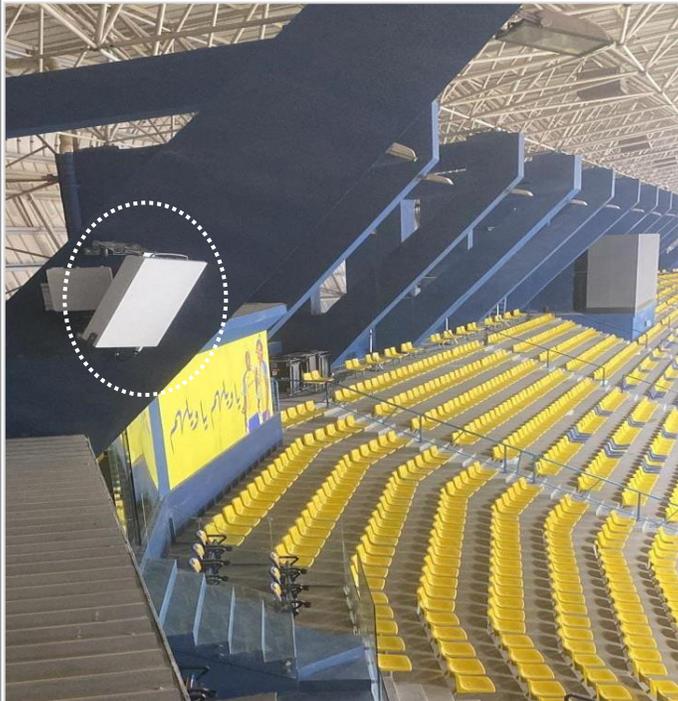

- Stadium Structure Challenges.
- High-Capacity Venue.
- High DL and UL throughput demand.
- Power and Space Limitation.
- Interference Management Between High Number of Sectors.
- Future Proof / Scalability.
- Outdoor Sites Interference.

Deployment Challenges:

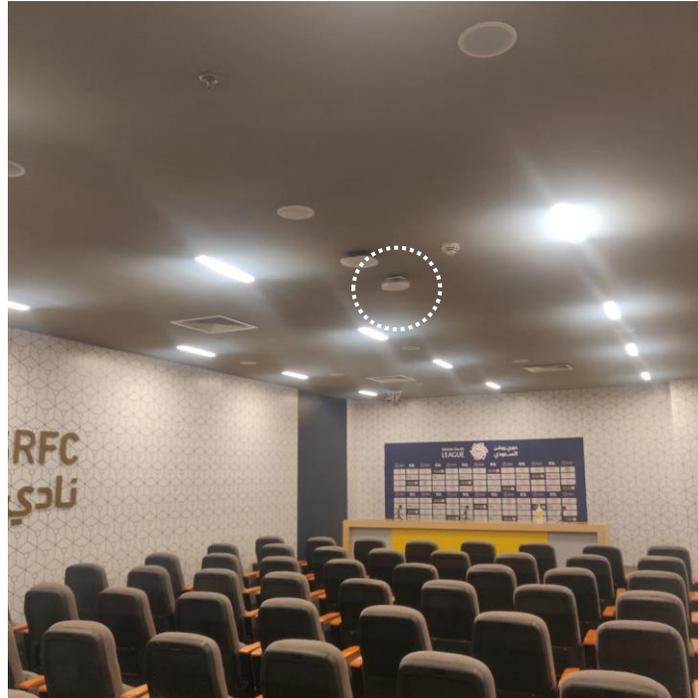

- Aesthetic Requirements.
- Antennas Placement.
- Cable Routing Challenges.
- RF Power Tuning.
- Power Sources Availability.

Sample of Installation at Al Awwal Park:

Outdoor 5G Radio

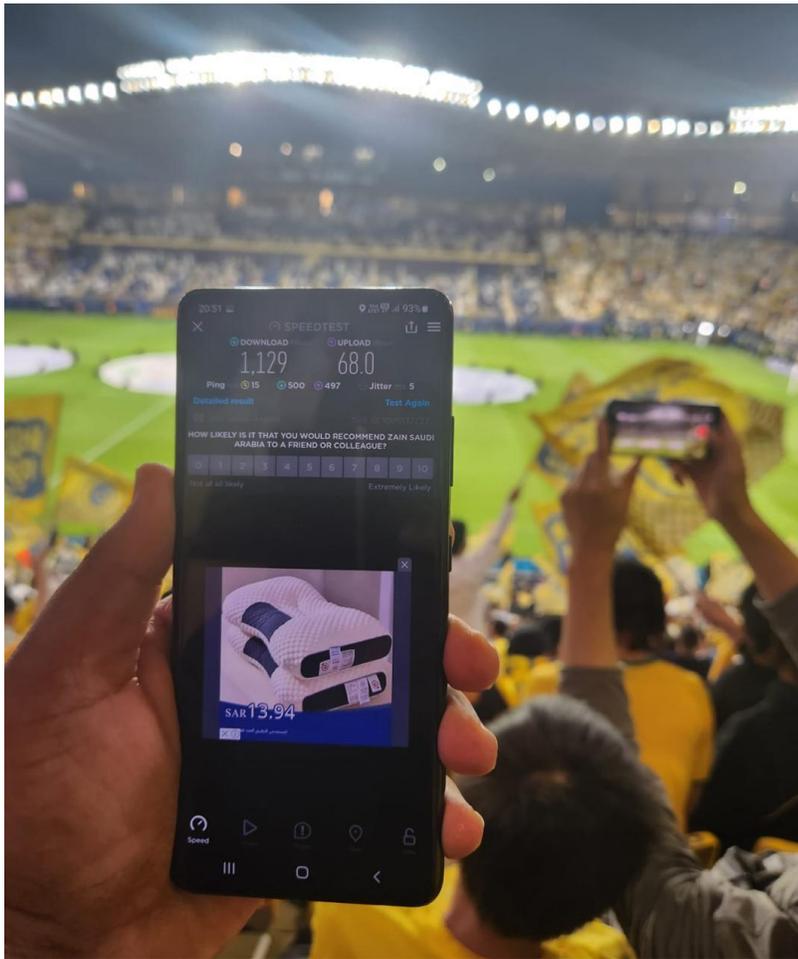

Indoor 5G small cell

Wi-Fi AP under the seats

Rich Mobile User Experience

RU at Low Current Rooms

Wi-Fi Solutions at Al Awwal Park

Design:

Implementation:

Monetization:

Step: 1.

Data Collection Via Guest Wi-Fi

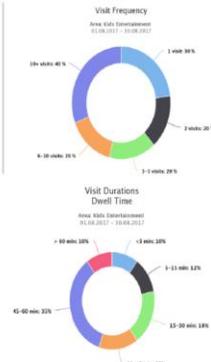

Encourage fans to connect to Wi-Fi and enroll to CRM for future engagement.

Step: 2.

- **3rd Party Ads:** Agreement with Sports and F&B brands to promote their brand.
- **Stadium Ads:** Promote outlets, upcoming events, loyalty program, etc.

Sample Installation of Massive MIMO

AIR 6449 B43

KRD901203/11

AIR 6449, a TDD Antenna Integrated Radio unit with 64 transmitters and 64 receivers, improves LTE TDD spectral efficiency. It has enhanced Common Public Radio Interfaces (eCPRI) and its operational bandwidth is 200 MHz. AIR 6449 is part of the Ericsson Radio System portfolio.

AQQL AirScale MAA 64T64R 192AE n78 320W - eCPRI

Wide band massive MIMO Adaptive Antenna Solution for n78 (3.4-3.8 GHz)

Product Benefits

- Adaptive Antenna System for optimized capacity and coverage
- Digital beamforming for multi-user MIMO
- Beamforming capable 64T64R with total 320 W output power
- Wide frequency range with 200 MHz occupied BW

Specification*	Details (Preliminary)
RAT standards	NR, ready for LTE
TX/RX, BF, AE	64T64R, Digital Beamforming, 192AE
Max Output Power	320 W
Supported Bands	n78 TDD: 3400-3800 MHz
Instantaneous bandwidth (IBW)	400 MHz
Occupied bandwidth (OBW)	200 MHz
NR Carrier bandwidth	Up to 100 MHz, 2 CC combinations
Fronthaul Support	eCPRI
Supply voltage	-48 V DC
Operational temperature range	-40 °C to +55 °C / Active Cooling
Dimensions (H x W x D)	1001 x 448 x 113 mm
Volume / Weight	491 / 36 kg
Power Consumption	Max: 1720W

45,000 Seats Capacity

Area:
110 Sq. m

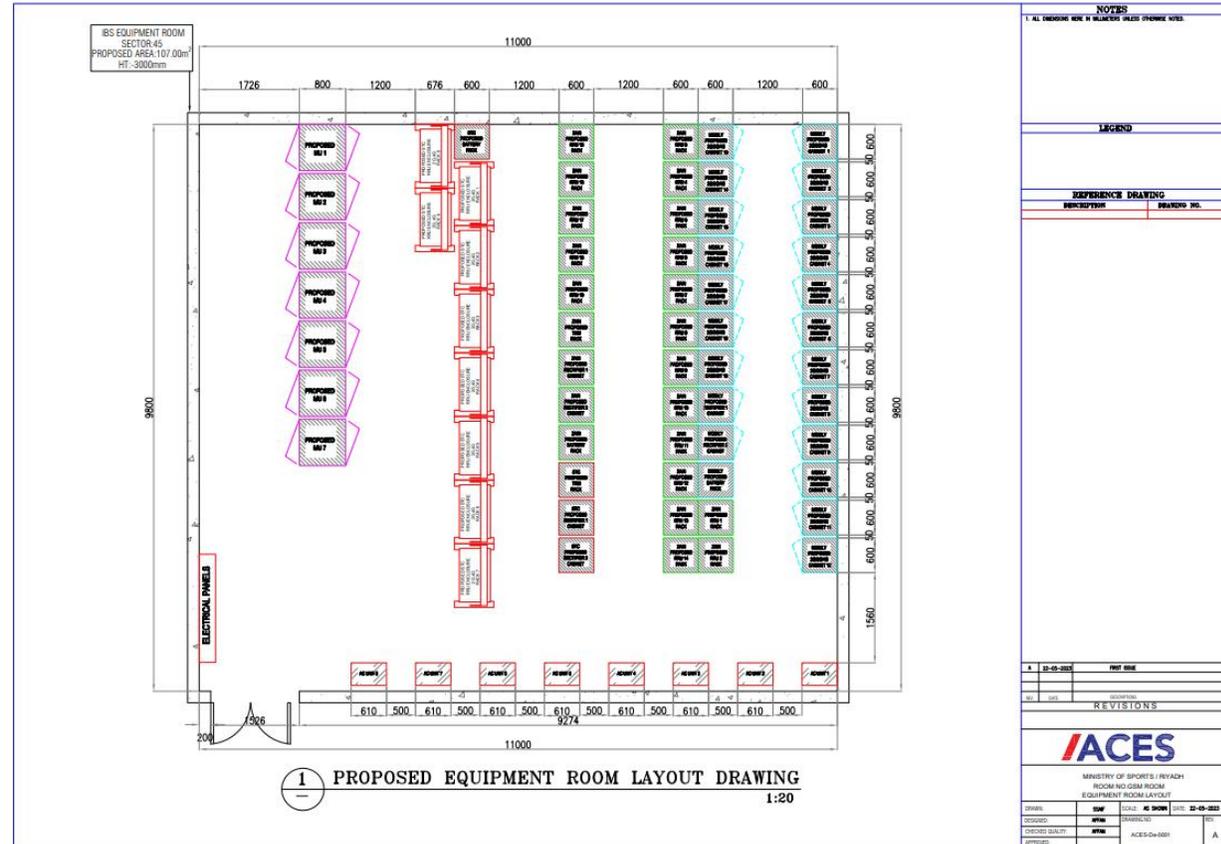

Power:
1250 Amps, 3P, 380VAC

Cooling :
67.0 Tons

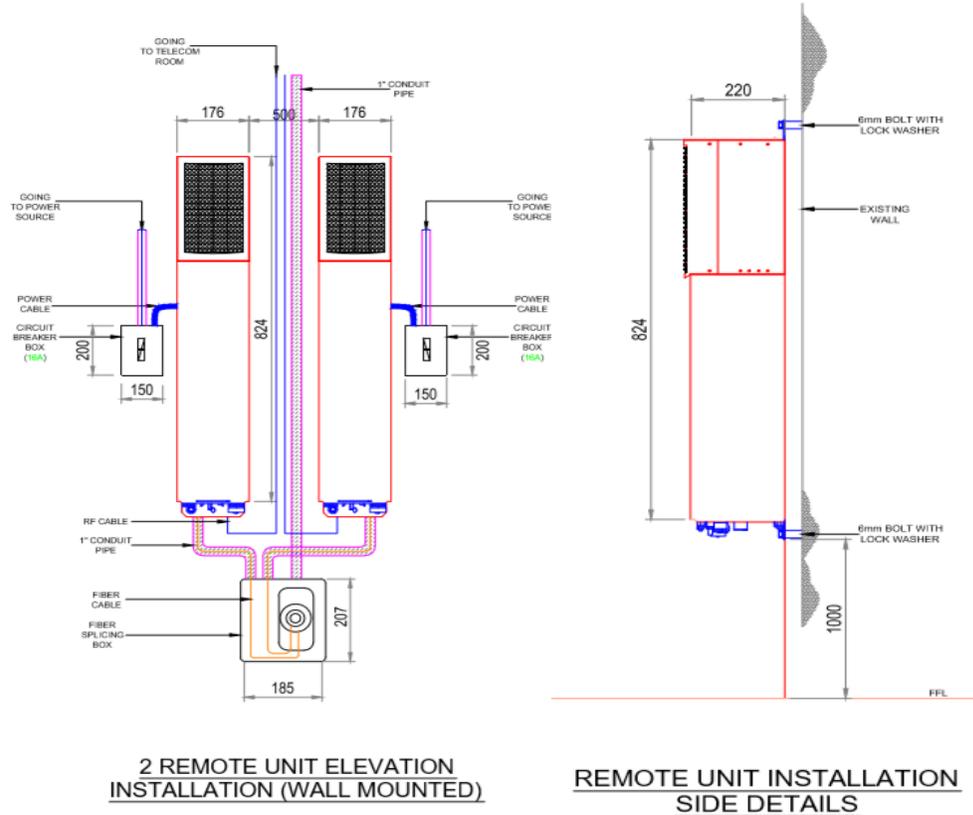

FM200 :
178.0 KG

Area:
At any non-public location, but preferably in **LOW** current rooms.

Power:
16 Amps, 1P, 220VAC for each RU

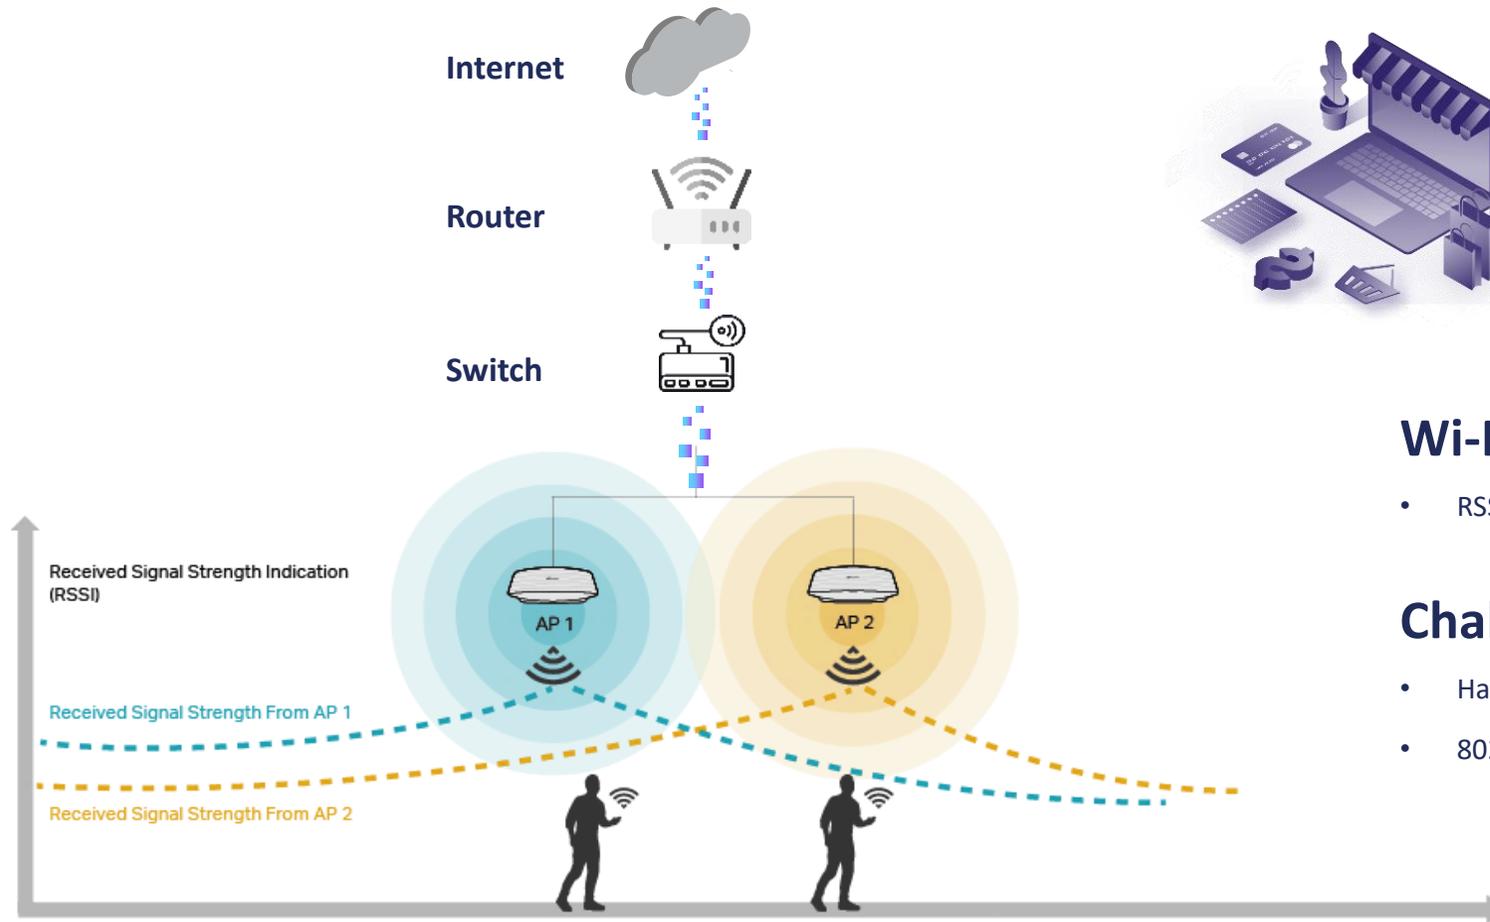

The required quantity of the above RUs in the **LOW** current room will be determined by the quantity and distribution of stadium's **LOW** current rooms.

Mobility in Wi-Fi Networks

In a multi-vendor deployment, there are still many issues to be handled by system integrators/developers.

Wi-Fi Handover:

- RSSI Monitoring, AP Scanning, AP Switching

Challenges:

- Handover speed, interruption, authentication
- 802.11 k,r,v addressed many issues

Wi-Fi Provisioning System

ACES Research & Development Team developed an in-house system that:

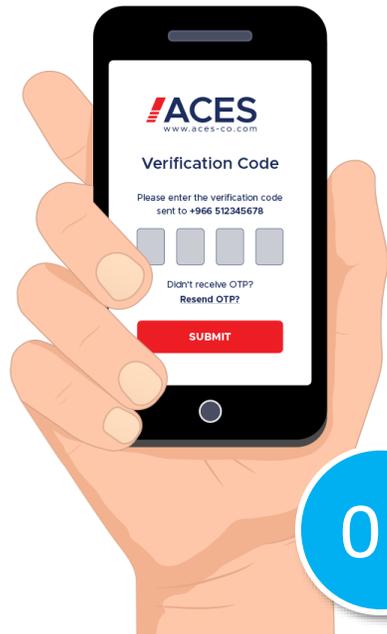

- Enables full customization of the Wi-Fi provisioning process
- Provides a content management system (CMS) for easy management and update of the Wi-Fi process pages
- Can be fully customized to accommodate additional requirements and regulations, e.g., phone number verification, etc.

Wi-Fi provisioning typical process is

- Typically governed by a set of regulations (government, venue owners, etc.)
- Often have dynamic requirements (e.g., consents, announcements, dynamic content, etc.)
- Commercial solutions lack flexibility

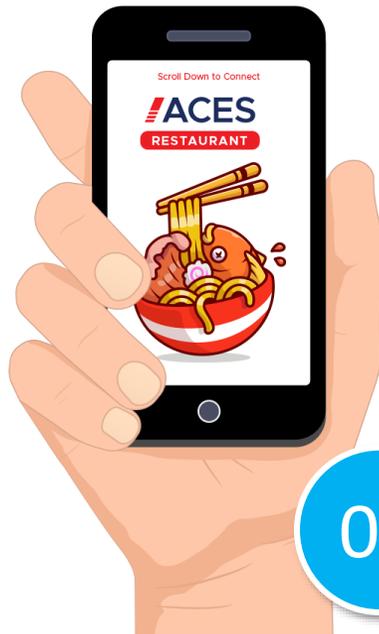

ACES Solutions

01

Authentication

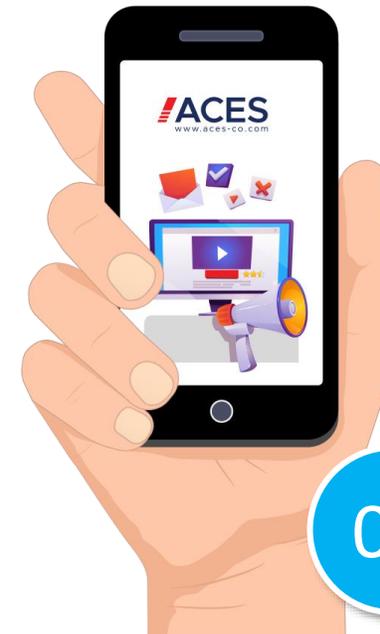

- Customizable authentication platform
- Works with different app vendor

02

Landing Page

- Clients can design/modify pages with simple drag & drop platform

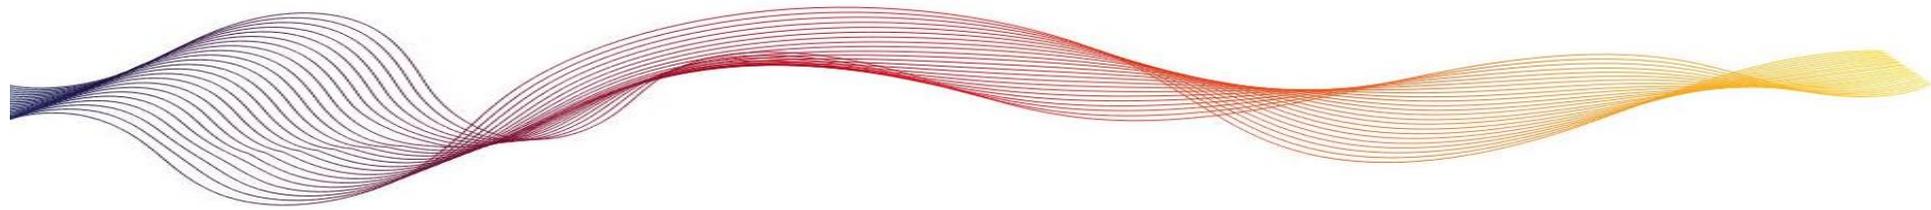

03

Connectivity

- Wi-Fi provisioned
- Online connectivity is on
